ACCURATE AND AFFORDABLE PHOSPHATE MEASUREMENT

Orthophosphates are found in natural and waste waters. They are commonly added to drinking water as a corrosion inhibitor. The instantaneous analysis of orthophosphate by colorimetric determination provides rapid results using a standard analysis technique.

The HANNA HI 713 Checker[®]HC bridges the gap between simple chemical test kits and professional instrumentation. Chemical test kits are not very accurate and only give 5 to 10 points resolution while professional instrumentation can cost hundreds of dollars and can be time consuming to calibrate and maintain. The HANNA HI 713 Checker[®]HC is accurate and affordable.

The HI 713 Checker[®]HC portable handheld colorimeter features a resolution of 0.01 ppm (250 points) and $\pm 4\%$ of reading ± 0.04 accuracy. The HI 713 Checker[®]HC uses an adaptation of Standard Method 4500-P E.

The contoured style of this Checker[®]HC fits in your palm and pocket perfectly and the large LCD is easy to read. The auto shut-off feature assures the battery life will not be drained if you forget to turn it off.

The HI 713 Checker[®]HC is extremely simple to use. First, zero the instrument with your water sample. Next, add the reagent. Last, Place the vial into the HI 713 Checker[®]HC, press the button and read the results. It's that easy.
